ABSTRACTED-PUB-NO: JP 02172905A

BASIC-ABSTRACT:

Oil contains one or more high molecular silicone cpds. The solvent comprises (A) at least an isoparaffin hydrocarbon and (B) solvent comprising at least one or more of chlorofluorocarbon and liquefied petroleum gas. Isoparaffin has 16-32C.

USE - The oil imparts rich lustre and smoothness to hair. It is applied uniformly to the hair without excess oiliness and no unpleasant smell.

ABSTRACTED-PUB-NO: DE 2611500A

BASIC-ABSTRACT:

The hood hair dryer has an air flow channel (53) which is attached to the blower (45) and has a heating system (50) into which projects an atomizer nozzle (48) of a steam generator (46) so that the hair, e.g. wound upon on rollers, is exposed to a damp to wet warm a air current wherein the water content of the warm air is maintained constant with the prevailing atmospheric moisture. The heating unit (50) in the hood (20) preferably has an intake opening (55) which is near the blower (45) at the open end of the hood and a distributor opening which is located at substantially the highest point in the hood. As an example at a room temperature of about 20 deg. C and an atmospheric moisture content of about 40% the heat treatment of the hair is carried out within the range having the five temperature/relative moisture points of 40 deg. C/80%, 40 deg. C/62%, 55 deg. C/30%, 80 deg. C/30%, 80 deg. C/80%.

ABSTRACTED-PUB-NO: CN 1082397A
BASIC-ABSTRACT:

The present invention consists of 70-80% of liquid paraffin wax, 20-25% of olive oil, 1-3% of mink oil and 0.02-0.7% of ginsenoside. After hair washing, the said hair oil is dripped into clear water and emulsion applied to hair. After use, it can form a thin film on the surface of the hair making hair black, bright, soft and easy to comb. The composition has a nutritional effect upon hair and also supplements it with oil.
